## DESCRIPTION

Hi, my name is Alex – Junior Web Developer :) I am currently studying Economic Informatics at UBB, FSEGA, Cluj-Napoca. I would describe myself as an IT and coding enthusiast. Web development is my main passion. Front-End coding offered me the opportunity to combine both my accurate and analitical thinking and my plentiful creativity. I am a dedicated, self-motivated and hard-working person. I always struggle to learn as much as possible and to improve myself constantly. I am also a fan of a good organisation and an effective time management.

## EDUCATION

- **ReactJS Course** - Școala Informală de IT  
October 2021 – November 2021
- **Web Development Course** - Școala Informală de IT  
February 2021 – May 2021
- **Business Information Systems** - Faculty of Economics and Business Administration, UBB, Cluj-Napoca  
2020 - Present

## TECHNICAL SKILLS

- C/C++
- HTML5
- CSS3
- JavaScript (Vanilla)
- Postman API
- ES6
- Bootstrap
- Node Package Manager
- React Router
- React Redux
- Git

## NON-TECHNICAL SKILLS

- Teamwork
- Analitical Thinking
- Discipline
- Adaptability
- Problem-solving
- Time-Management
- Communication

## PROJECTS ↓

# PROJECTS

## PERSONAL PORTOFOLIO

This app is a quick presentation of me and my personal projects. All of them are provided there by photos and GIFs and you can see them live if you want.

## SNEAKERS BOUTIQUE

Sneakers Boutique is a footwear shop wich includes the main functionalities of an online store application. The products are presented to the user by the home page, from wich he can see the details(price, description, materials) of the article that he is excited about. Of course, he can also introduce it in his cart and modify its amount afterwards. This project was realised with Vanilla JavaScript and is connected to a Firebase database. It was used to store the products information wich was fetched from the frontend application by AJAX and APIs.

## NO WHEEL GAP

No-Wheel-Gap is an automotive social network and the project that I am currently working on. It is a ReactJS application wich is going to include users, posts, likes, comments and so on. I will come back with updates soon.

The network application uses a MongoDB database wich stores users, posts, passwords, emails and so on. The components are linked by React Router and the state is managed through React Redux.

## WEATHER FORECAST APP

The Weather Forecast App is one of the first projects that I worked on. It indicates the current weather conditions and reveals the forecast for the next six days. The user can look for the location that he is curious about or he can let the app to find out his position.

## GAMES STORE APP

The Game Store App was realized as a workshop in order to practice working with APIs and HTTP Request methods. The Home page displays all the games and the Details page shows their specifications, wich can be modified. It is also possible to add new games.
